

## SS7ware, Inc. joins Facebook-led Telecom Infra Project

February 22, 2016 - Barcelona, Spain

SS7ware Inc. joins the Telecom Infra Project initiated by Facebook along with Deutsche Telekom, EE, SK Telekom, Intel Corporation, Nokia, and other members of the mobile ecosystem. The TIP aims to redefine the current approach to cellular network technology and bring connectivity to the unconnected billions around the world.

As a member, SS7ware will work with carriers, equipment providers and system integrators to provide mobile networking equipment for efficient, cost-effective infrastructure.

Announced during the Mobile World Congress in Barcelona this year, the Telecom Infra Project sets to accelerate innovation and make mobile technology more available in parts of the world where infrastructure is lacking.

SS7ware has always been committed to providing affordable, flexible and innovative mobile networking equipment. Our products – the YateUCN unified LTE/GSM core network, the SatSite LTE/GSM base station, and the YateHSS/HLR – are designed having in mind simplicity for network deployment and management in urban, as well as rural areas.

SS7ware equipment is built on a 'beyond SDN approach', combining the virtualization and automation from network function virtualization (NFV) and the programmable nature of software-defined networking (SDN). This allows a better control over the network scalability and performance, and generates savings on operation, management and training.

Based on close collaboration between its members – mobile operators, system integrators, and equipment providers –, the Telecom Infra Project joins in on sustained efforts from the industry to connect the next billions. According to the GSMA, only 3.5 billion people were estimated to own a mobile subscription at the end of 2014.

The Telecom Infra Project will "focus on developing new technologies and exploring new approaches to deploying in both developed and emerging markets". ### Supporting Quotes

“Our vision has always been to reduce operator costs by innovating with mobile network equipment. So we're evidently very excited to see this group come to life; and we're confident that joining efforts with our industry partners we'll manage to create better access for thousands of those isolated communities in the world.”

Diana Cionoiu, CEO SS7ware Inc

### About us

SS7ware, Inc. and Legba, Inc. provide innovative GSM/LTE infrastructure for mobile network operators. SS7ware Inc. is a subsidiary of Null Team, the company behind Yate.
